Due Diligence Data Search Agent

CAI Score L3 · Operate — Bounded autonomy

▲ this agent

L1 Assist	L2 Draft	L3 Operate	L4 Decide	L5 Autonomous
--------------	-------------	---------------	--------------	------------------

TIER	PILLAR	AUTOMATION	HUMAN ROLE
L3 · Operate	Risk, Security & Compliance	≈60% of routine effort	Owns exceptions and oversight

01 — Executive summary

Due Diligence Data Search Agent is a CAI Score L3 (Operate) agent for risk, security & compliance. Searches internal data to answer due-diligence questionnaires quickly and accurately, instead of manual lookups across systems. It operates with bounded autonomy: a person owns exceptions and retains workflow oversight. Indicatively, it can redirect around 60% of the routine effort this work consumes.

02 — Problem & context

- Answering one DDQ means manual lookups across five different systems.
- Every responder writes answers differently, so quality is uneven.

03 — Representative use cases

- Searches across all connected internal systems to retrieve relevant data for each DDQ question.
- Drafts sourced, cited answers for the responding team to review and approve — not draft from scratch.
- Enforces consistent answer quality and format across all DDQ responses, regardless of which team member responds.
- Reduces DDQ turnaround from days to hours by eliminating the manual cross-system lookup.
- Produces the evidence to track response accuracy, turnaround time, and source citation completeness.

04 — How to use it

- 1 Connect it in your tenant to the systems this work already touches (due diligence).
- 2 Confirm scope, the named owner, and the oversight the tier requires.
- 3 Detects the trigger in the workflow
- 4 Handles routine in-policy cases end to end
- 5 Escalates exceptions to the owner
- 6 Logs every action for audit
- 7 Review the audit log and KPI movement after each cycle; tune scope as you learn.

05 — Where it fits in the process

Sits at the start of DDQ turnaround — it finds and drafts sourced answers from internal systems, so the team reviews and confirms rather than hunting.

Operating loop for a L3 agent — bounded autonomy.

06 — Risk assessment

#	RISK	LIKELIHOOD	IMPACT	MITIGATION / CONTROL
1	Incorrect or incomplete output	Medium	Medium	Routine cases only; exceptions and anything material are escalated to the named owner, with a full audit trail.
2	Over-reliance / reduced human scrutiny	Medium	Medium	Tier oversight keeps a human in the loop; KPIs monitor quality so reliance never outruns control.
3	Exposure of sensitive data	Medium	Medium	Runs inside your own tenant; Colleague AI processes none of your data, and access stays under your existing controls.
4	Behavioural drift over time	Medium	Low	Periodic review against KPIs and sampling detects drift; scope and prompts are version-controlled.
5	Out-of-policy or edge-case handling	Medium	Medium	Scope is bounded and documented; anything outside it is escalated, not improvised.

Residual likelihood × impact after the tier's built-in controls. Numbers map to the table above.

07 — Regulatory & compliance impact

FRAMEWORK	RELEVANCE	HOW THIS AGENT ALIGNS
EU AI Act	Operational use under human oversight; logging and risk-tiering apply.	Documented risk tier, human oversight and event logging per agent — designed to map to the obligations.
DORA	Relevant where the function is in scope for financial-sector operational resilience.	Actions are logged and attributable, supporting resilience and traceability requirements — designed to map to.
GDPR	Applies wherever personal data is in scope of the workflow.	Data stays in your tenant; Colleague AI processes none of it. Purpose limitation and minimisation are preserved.
ISO/IEC 42001	AI management-system controls: roles, monitoring, review.	The agent operates within a documented management system — defined tier, named roles, logging and review. Designed to meet; not certified.

“Designed to map to” / “designed to meet” describe alignment with the CAI Score framework, not external certification. Confirm obligations with your compliance function.

08 — Value & illustrative ROI

Searches internal data to answer due-diligence questionnaires quickly and accurately, instead of manual lookups across systems.

Assumptions (illustrative — replace with your own)	Result
4 FTE engaged · 1840 productive h/FTE/yr · 60% addressable · €60/h blended	≈ 4,416 hours/yr redirected · ≈ €265,000/yr indicative value

Figures are an illustrative model to be validated against your own volumes and rates – not a guarantee.

KPIs to track

Improved efficiency and accuracy on due-diligence responses.

09 — Recommendations

- Connect the agent to all internal data sources referenced in typical DDQs before deployment.
- Assign a named DDQ owner to review and approve every draft response before submission.
- Review source citation accuracy in the first five DDQs; reconfigure data connections where gaps appear.
- Baseline turnaround time and response quality before go-live.

10 — Governance & method

This agent runs in your own Microsoft/Azure tenant; Colleague AI hosts only the control plane (score, policy, audit) and processes none of your data. A person owns exceptions and retains workflow oversight. Every action is time-stamped and attributable. The CAI Score classification is documented and open to challenge.
